

C-23

Aqueous solution of esterified resin.

Specifications	TYPICAL VALUE
Solids content (%)	23 x 1
Ph	10 x 1
Brightness	Extraordinary

The C-23 is a semi-synthetic resin solution with wide compatibility in formulations in alkaline medium, when a maximum gloss film is required, in which it acts as a leveler and paver.

In its very large field of uses stand out:

- Floor polishes.
- Tafilletes and tanned in general.

What is outlined in this form is the result of our experience and we offer it for information but without implying any commitment on our part.

The results in each particular application should be tested by the direct managers of the specific formulation.
