HERFIX D-4

Concentrated fixative

SPECS	TYPICAL VALUE
Nature	Synthetic polymer solution
Solubility	Soluble in water
pH	5,5 ± 0,5
Density at 20ºC (gr/cm^3)	1,02 ± 0,01

HERFIX D-4 is a concentrated fixative that is applied by airbrush, forming a thin film that dries quickly, thus allowing subsequent application on the glazing line. It is used both on the raw enamel and on each of the silkscreens. It is prepared with water in a recommended dilution of 3% - 8% of fixative in water.

ADVANTAGES OF HERFIX D-4

1.- HERFIX D-4 is a product that allows the application of successive screen prints in very little space, as it fixes the previous layer and dries quickly.
2.- This product does not clog the airbrush nozzles and is easily cleaned with water.
3.- It is not toxic, it is not flammable.

PRESENTATION:

- Drum of 120 kg
- IBC of 1000 kg

What is outlined in this document is the result of our experience and we offer it for information, but without implying any commitment on our part. The results in each particular application must be tested by those directly responsible for the specific formulation.
