

SERIPAX PA-5

Quick-drying serigraphic vehicle for stoneware, monoporous and bicoction.

Specifications	TYPICAL VALUE
Solubility in water	Soluble
Viscosity Ford Cup No4, 25oC(s)	26 – 32,5
Density at 20oC (g/cm ³)	1.09 x 0.01
Waste Calcination (%)	< 0.2

SERIPAX PA-5 is a quick-drying screen printing vehicle. It is therefore suitable for use in applications where the part is not hot (bicoction) or in those where the drying space is insufficient. It can be packed at densities that oscillate between 1.55-1.75 gr/ml., obtaining pastes that can be applied on screens up to 90 wires/cm².

ADVANTAGES OF SERIPAX PA-5

- 1.- Maximizes color, both in summer and winter by maintaining the viscosity of pastes with temperature changes.
- 2.- There is no decanting of inorganic particles during storage.
- 3.- Its special rheology makes it a vehicle that significantly improves the definition of the drawing.
- 4.- It is non-toxic, not flammable.

The product remains stable for one year if stored in temperature conditions between 0 and 40oC.

These data are the result of laboratory tests, endorsed by the Ceramic Industry in General. However, we point them out without any commitment on our part and as a result of our experience.
