

HERSINA TE-586

Water emulsion of an acrylic copolymer..

Specifications	TYPICAL VALUE
Solid character	Non-ionic
Solids content (%)	40 x 1
рН	8.5 x 1
Color	White

Hersina TE-586 is an acrylic resin in emulsion with good adhesions on difficult supports. It offers good brightness and water resistance. It is a resin compatible with all pigments normally used. It can be used as a single binder with pre-dispersed pigments. It offers excellent property balance: high penetration power, film cohesion and resistance to external agents.

It must be stored in the source container or in stainless steel, aluminium or plastic tanks. If steel tanks are used they must be protected internally with an anti-corrosive layer. To ensure good storage preservation, simply keep the containers closed, to avoid the formation of creams and skins on the surface. The product should be protected from frost and temperatures above 30oC. Under these conditions, the product can be stored for 6 months without noticeable alterations in its properties.

Delivered in containers.

What is outlined in this form is the result of our experience and we offer it for information but without implying any commitment on our part.

The results in each particular application should be tested by the direct managers of the specific formulation.
