

HERSIL TE-201

Silicone emulsion

Specifications	TYPICAL VALUE
Ionic character	Non-ionic
Solids content (%)	37 x 2
pH	7 x 1
Dilution in water	Good
Color	Milky white

Hersil Te-201 finds applications as an additive in the formulation of footwear maintenance products and polishers for furniture and leather. Its application confers a very soft and smooth touch with a good degree of water resistance and non-stickness.

What is outlined in this form is the result of our experience and we offer it for information but without implying any commitment on our part.

The results in each particular application should be tested by the direct managers of the specific formulation.
