

HERSINA TE-79

Acrylic copolymer

Specifications	TYPICAL VALUE
Color	Milky white
Solids content (%)	22 x 1
pH	4 x 1
Mechanical stability	Stable

Hersina TE-97 is stabilized with surfactants with acrylic acid content, allowing it to solubilize in alkaline medium offering a significant increase in viscosity. This allows it to be used as a thickener, as it offers a very suitable rheology for creams.

In its wide field of uses it stands out in the finishes for footwear.
