

HERLENE TE-342

Specifications	TYPICAL VALUE
Character	Anionic
Solids content (%)	30 x 1
Ph	9.5 x 1
Color	White
Viscosity* (cPs)	600 – 900

*Viscosity measured at 20oC in Brookfield DV-E viscometer, at 60 rpm and S34

HERLENE TE-342 is an emulsion made from low melting point waxes designed for the lubrication of metal parts.

What is outlined in this form is the result of our experience and we offer it for information, but without implying any commitment on our part.

The results in each particular application should be tested by the direct managers of the specific formulation.
