

HERGRAS C-20

SPECS	TYPICAL VALUE
Color	White

HERGRAS C-20 is a mixture of saturated hydrocarbons. The appearance of the product coincides with a soft, translucent and greasy compound to the touch.

Among its applications, the hydration treatment of leather stands out, giving it greater flexibility and impermeability. This is why HERGRAS C-20 is used as a finishing cream for oiled leather, as well as for oiled, water-repellent and waterproof footwear.

This product meets the requirements of ZDHC MRSL and is not composed of any of the restricted substances of version V.3.

PRESENTATION:

180 kg metal drum
