

CERA BG-540

Formulated with carnauba wax emulsion and acrylic dispersion

Specifications	TYPICAL VALUE
Character	Non-ionic
Solids content (%)	40 x 1
Ph	8 x 1
Brightness	Extraordinary

Wax BG-540 is a mixture of carnauba wax emulsion and acrylic dispersion that is used in the manufacture of waxes for soils cleaning providing perspiration, protection, elasticity, and renewal of the finish that has suffered wear or deterioration.

The concentration for cleaning waxes go between 10 to 25 % by also adding 1 to 5 % anionic surfactant.

In furniture formulations prevents drying and deterioration of finishes, being their usual dilution at 10%.

In all formulations it is necessary to incorporate suitable bacterial preservative and we recommend using decalcified water for greater stability for dilution.

What is outlined in this form is the result of our experience and we offer it for information but without implying any commitment on our part.

The results in each particular application should be tested by the direct managers of the specific formulation.
