

CERA BG-540

Carnauba wax emulsion and acrylic dispersion formulation

SPECS	TYPICAL VALUE
Character	Non ionic
Solids content (%)	40 ± 1
pH	8 ± 1
Bright	Extraordinary

BG-540 wax is a mixture of carnauba wax emulsion and acrylic dispersion that is used in the manufacture of floor waxes and laviceras, providing breathability, protection, elasticity and renewal of the finish that has suffered wear or deterioration.

Recommended Dosage

The concentration for laviceras is 10 to 25 % with the addition of 1 to 5 % anionic surfactant.

Its application in formulations for furniture prevents the drying and deterioration of the finishes, with its usual dilution being 10%.

In all formulations it is necessary to incorporate suitable bacterial preservative and we recommend using softened water for dilution for greater stability.
