

## HERLENE EA-35

Polyethylene wax emulsion for textile and spinning industry

| Specifications     | TYPICAL VALUE |
|--------------------|---------------|
| Ionic character    | Non-ionic     |
| Solids content (%) | 35 x 1        |
| pH                 | 9.5 x 1       |
| Color              | Cream         |

HERLENE EA-35 is used as a non-ionic softener in the textile sector. It is especially suitable for synthetic fibers to which it provides a full touch and softness. The lubricating effect improves tear resistance and decreases the abrasion provided by the hard resins typical of the finish.

It has a wide compatibility in textile formulations in acidic, neutral or alkaline medium.

What is outlined in this form is the result of our experience and we offer it for information, but without implying any commitment on our part.

The results in each particular application should be tested by the direct managers of the specific formulation.
