

HERLENE S-22

Emulsion for the textile and spinning industry

Specifications	TYPICAL VALUE
Ionic character	Non-ionic
Solids content (%)	21 x 1
pH	4.5 x 1
Color	White

Softens- lubricates specially suitable for synthetic fibers to which it provides a full touch and softness. The lubricating effect improves tear resistance and decreases the abrasion provided by the hard resins typical of the finish.

Facilitates subsequent sewing when used in the finishing of cellulosic fibers.

It is dilutable in any proportion with water and due to its non-ionic character compatible with all products normally used in the textile finish.

The employment dose is between 10 and 30 grs/Lt.

What is outlined in this form is the result of our experience and we offer it for information but without implying any commitment on our part.

The results in each particular application should be tested by the direct managers of the specific formulation.
