

HERLENE P-117

Polyethylene wax emulsion

Specifications	TYPICAL VALUE
Ionic character	Non-ionic
Solids content (%)	35 x 1
pH	9 x 1
Brightness	Extraordinary

HERLENE P-117 is a micro-emulsion, with wide compatibility in formulations, processed at high pressure, of polyethylene wax of very high solidification point and hardness that make it the ideal emulsion in formulations in acidic, neutral or alkaline medium, when a film of maximum brightness hardness and abrasion resistance is required.

In its exceptionally large field of uses it stands out:

- Floor polishes.
- Tafiletes and tanned in general.
- Textile and spinning industry.
- Paper industry.
- Inks
